

Part Number ZK11001 best ceramic brake pads compatible with Interchange Part Number D1293 D1222 ensuring braking performance

Our Product Introduction

for more products please visit us on heritobrake.com

Basic Information

- Brand Name: Herito
- Model Number: ZK-10001

Product Specification

- Installationtype: Bolt-on
- Heatresistance: Up To 600°C
- Manufacturer Part Number: ZK-11001
- Warranty: 12 Months Manufacturer Warranty
- Chamfered: Yes
- Material: Ceramic
- Certifications: ISO 9001, DOT Approved
- Easy To Install: Yes

Product Description:

The Disc Brake Pad Set is engineered to provide superior stopping power, exceptional durability, and reliable performance for a wide range of vehicles. Designed with precision and crafted from the best brake pad material available, these brake pads ensure optimal braking efficiency while minimizing noise and dust. Whether you are a daily commuter or an enthusiast seeking enhanced braking performance, this set of disc brake pads is an ideal choice that balances safety, longevity, and comfort.

One of the standout features of this Disc Brake Pad Set is the inclusion of a wear indicator. This built-in wear indicator alerts the driver when the brake pads have worn down to a critical level, ensuring timely replacement and preventing potential damage to the brake rotors. This feature enhances safety and maintenance convenience, giving you peace of mind every time you hit the road.

The installation type for this brake pad set is bolt-on, which simplifies the installation process and provides a secure fit. This bolt-on design ensures that the pads remain firmly in place under all driving conditions, reducing the risk of movement or misalignment that could compromise braking performance. Additionally, the pads are chamfered, a design element that helps reduce noise and vibrations during braking, contributing to a quieter and smoother driving experience.

These disc brake pads conform to the FMSI standard D868, ensuring compatibility with a wide range of vehicles and adherence to strict quality and dimensional standards. The FMSI certification guarantees that the pads will fit perfectly and function optimally with your vehicle's braking system, avoiding common issues such as uneven wear or poor contact with the rotor.

Quality and safety are paramount in the manufacturing of this Disc Brake Pad Set. The pads are certified under ISO 9001, which is an internationally recognized standard for quality management systems. This certification reflects the manufacturer's commitment to consistent quality, rigorous testing, and continuous improvement in production processes. Furthermore, the pads are DOT approved, meeting the stringent requirements set by the Department of Transportation for brake components. This approval ensures that the brake pads are safe for use on public roads and deliver reliable stopping power under various driving conditions.

When it comes to brake pad materials, this product uses the best ceramic brake pads technology. Ceramic brake pads are renowned for their excellent heat dissipation, low dust production, and quiet operation. Unlike traditional organic or semi-metallic pads, ceramic pads provide a cleaner and more controlled braking experience without sacrificing performance. They also tend to have a longer lifespan and cause less wear on brake rotors, making them a cost-effective choice in the long run.

In summary, the Disc Brake Pad Set is a premium product that combines advanced features, high-quality materials, and strict certifications to deliver outstanding braking performance. With its wear indicator, bolt-on installation, chamfered edges, and compliance with FMSI D868 standards, this brake pad set is engineered to fit perfectly and function reliably. The inclusion of ISO 9001 and DOT approvals further underscores the product's commitment to quality and safety. By choosing these disc brake pads, you are investing in one of the best brake pad materials available on the market today, specifically the best ceramic brake pads, ensuring safe, quiet, and efficient braking every time.

Features:

Product Name: Disc Brake Pad Set

Installation Type: Bolt-on

Easy to Install: Yes

Braking System: ATE

Thickness: 0.5 Inches

FMSI Number: D868

Made from high-quality materials for reliable performance

Features ceramic brake pad technology for enhanced braking efficiency

Considered among the best ceramic brake pads for durability and low noise

Perfect choice if you are looking for the best ceramic brake pads for your vehicle

Technical Parameters:

FMSI	D868
Thickness	0.5 Inches
Package Quantity	1 Set (4 Pieces)
Interchange Part Number	D1293, D1222
Product Type	Brake Pad
Warranty	12 Months Manufacturer Warranty
Certifications	ISO 9001, DOT Approved
Braking System	ATE
Manufacturer Part Number	ZK-11001
Heat Resistance	Up To 600°C

Applications:

The Herito Disc Brake Pad Set, model number ZK-10001, is an essential component designed for high-performance braking systems,

particularly compatible with the ATE braking system. Manufactured in China with precision and quality assurance, these brake pads boast a thickness of 0.5 inches and feature chamfered edges to ensure smooth and quiet operation. Their heat resistance capability of up to 600°C makes them ideal for demanding driving conditions, providing reliable and consistent braking performance.

This product is perfectly suited for a wide range of application occasions and scenarios. Whether you are a professional mechanic or an automotive enthusiast, the Herito Disc Brake Pad Set is an excellent choice when upgrading or replacing your vehicle's brake pads. The pads' ceramic composition ensures they are among the best ceramic brake pads available on the market, offering superior durability, reduced brake dust, and enhanced stopping power. This makes them particularly suitable for daily commuting, long-distance driving, and even spirited driving sessions where heat generation can be significant.

In addition to everyday use, these brake pads are well-suited for more specialized scenarios such as track days or performance driving events. Their robust heat resistance up to 600°C means they maintain optimal friction levels under extreme temperatures, reducing brake fade and increasing safety during aggressive braking. The chamfered design also helps minimize noise and vibration, contributing to a more comfortable and controlled driving experience.

For vehicle maintenance and installation, the Herito Disc Brake Pad Set pairs well with a quality brake pad tool, ensuring proper fitting and alignment. Using the right tools not only simplifies the installation process but also helps maintain the integrity of the brake system and extends the lifespan of the pads. These good ceramic brake pads require minimal break-in time, allowing drivers to experience enhanced braking performance almost immediately after installation.

Overall, the Herito ZK-10001 brake pads are perfect for drivers seeking reliable, high-quality braking components capable of handling a variety of driving conditions. Their compatibility with the ATE braking system and robust design make them a practical choice whether you're performing routine maintenance, upgrading your braking system, or preparing your vehicle for more demanding driving scenarios. Trust in the manufacturer part number ZK-11001 to deliver consistent, high-performance stopping power every time you hit the road.

Customization:

Herito offers premium ceramic brake pads with the Disc Brake Pad Set model number ZK-10001, manufactured in China. As the best brake pad brand, Herito ensures high quality and durability with our ceramic brake pad material, capable of heat resistance up to 600°C. This set includes a wear indicator for added safety and comes with the manufacturer part number ZK-11001. Certified with ISO 9001 and DOT Approved, these ceramic brake pads provide reliable performance and long-lasting braking power for your vehicle.
