

## Standard best ceramic brake pads oe replacement yes suitable for a wide range of passenger and light commercial vehicles

Our Product Introduction

### Basic Information

- Brand Name: Herito
- Model Number: ZK-28010

### Product Specification

- Noiselevel: Low Noise Operation
- Oe Replacement: Yes
- Shims Included: Yes
- Weight: 0.5 Kg
- Heatresistance: Up To 600°C
- Size: Standard
- Operatingtemperaturerange: 40°C To 630°C
- Durability: High Wear Resistance

**Product Description:**

The Disc Brake Pad Set, factory number ZK-14006, represents a premium choice for vehicle owners seeking exceptional braking performance combined with long-lasting durability. Designed with advanced materials and precision engineering, these OEM brake pads are tailored to meet the rigorous demands of modern driving, providing a reliable and safe braking experience under various conditions. One of the standout features of this Disc Brake Pad Set is its low noise operation. Noise is a common issue with many brake pads, often leading to an annoying squeal or grinding sound during braking. However, these pads are specifically engineered to minimize noise, ensuring a quiet and comfortable ride. This makes them an excellent option for drivers who value peace and comfort while maintaining optimal braking efficiency.

Durability is another critical attribute of this brake pad set. Constructed with high wear resistance materials, the pads are designed to withstand the stresses and friction generated during braking over extended periods. This high wear resistance not only extends the lifespan of the brake pads but also helps maintain consistent braking performance throughout their use. Drivers can trust that these pads will provide dependable stopping power mile after mile, reducing the need for frequent replacements and maintenance.

The friction coefficient of these Disc Brake Pads is precisely calibrated at 0.35, striking an ideal balance between effective stopping power and reduced wear on both the pads and rotors. This friction level ensures that the brake pads deliver smooth and controlled braking without causing excessive heat buildup or premature wear. This characteristic contributes significantly to the overall safety and performance of the braking system.

These brake pads are categorized as ceramic brake pads, known for their superior performance characteristics compared to traditional organic or metallic pads. Ceramic brake pads typically generate less dust, produce less noise, and offer better heat dissipation, making them a preferred choice for many vehicle owners. The Disc Brake Pad Set ZK-14006 embodies all these qualities, positioning itself as one of the best ceramic brake pads available in the market today.

As OEM brake pads, these are manufactured to meet or exceed the original equipment specifications, ensuring a perfect fit and optimal compatibility with the vehicle's braking system. This guarantees that installation is straightforward and that the pads function seamlessly with other brake components. The use of OEM-quality materials and manufacturing processes also means that these brake pads uphold the highest standards of safety and reliability.

In summary, the Disc Brake Pad Set ZK-14006 offers a comprehensive solution for drivers who demand the best ceramic brake pads with a focus on low noise operation, high durability, and excellent wear resistance. With a friction coefficient optimized for safety and performance, these OEM brake pads provide consistent and reliable braking power under a wide range of driving conditions. Whether commuting in urban traffic or driving on highways, this brake pad set ensures that your vehicle stops confidently and quietly. Investing in this high-quality brake pad set means enhancing your vehicle's braking system with durable, efficient, and quiet ceramic brake pads designed to deliver long-lasting performance and peace of mind.

**Features:**

- Product Name: Disc Brake Pad Set
- Size: Standard
- Operating Temperature Range: -40°C to 630°C
- Noise Level: Low Noise Operation for a quiet driving experience
- Durability: High Wear Resistance ensures long-lasting performance
- Position: Suitable for Front and Rear installation
- OEM brake pads quality for reliable and consistent braking
- Ceramic brake pads included for enhanced braking efficiency and reduced dust
- Designed to meet OEM brake pads standards for optimal fit and safety

**Technical Parameters:**

Number of Pads	4
Noise Level	Low Noise Operation
Heat Resistance	Up To 600°C
Weight	0.5 Kg
Placement On Vehicle	Front And Rear
Size	Standard
OE Replacement	Yes
Shims Included	Yes
Slotted	Yes
Wear Resistance	High Wear Resistance

**Applications:**

The Herito Disc Brake Pad Set, model number ZK-28010, is designed to provide exceptional braking performance for a variety of vehicles. Manufactured in China under factory number ZK-14006, these brake pads are engineered to meet the highest standards of quality and reliability. With a friction coefficient of 0.35 and heat resistance up to 600°C, this set ensures consistent stopping power even

under extreme driving conditions.

These good ceramic brake pads are suitable for both front and rear placement on vehicles, offering comprehensive coverage and enhanced safety. The set includes four pads, making it ideal for a complete brake system replacement. Their ceramic composition not only delivers smooth and quiet braking but also produces less dust compared to traditional pads, maintaining cleaner wheels and reducing maintenance efforts.

The Herito brake pads excel in a variety of application occasions and scenarios. For everyday city driving, they provide reliable stopping power that enhances driver confidence in stop-and-go traffic. On highways or long-distance journeys, the heat resistance up to 600°C ensures that the pads maintain their effectiveness even during prolonged braking or downhill descents, making them a dependable choice for road trips and high-speed travel.

In more demanding environments such as mountainous terrain or towing heavy loads, these best ceramic brake pads stand out by preventing brake fade and maintaining consistent performance. This makes them an excellent option for drivers who require durable and high-performance braking solutions. Additionally, as OEM brake pads, the Herito ZK-28010 set guarantees compatibility and easy installation, fitting seamlessly with original vehicle specifications.

Whether you are replacing worn-out pads or upgrading your braking system, the Herito Disc Brake Pad Set offers a perfect balance of performance, durability, and comfort across diverse driving conditions. Their advanced ceramic formulation and robust construction make them a trusted choice for drivers seeking dependable stopping power and longevity in various driving scenarios.

### Customization:

Herito offers product customization services for the Disc Brake Pad Set, model number ZK-28010, designed and manufactured in China. Our ceramic brake pads provide low noise operation, ensuring a quiet and smooth braking experience for both front and rear positions. With high wear resistance and heat resistance up to 600°C, these brake pads deliver exceptional durability and performance under demanding conditions. Weighing only 0.5 Kg, the set is optimized for efficiency and ease of installation. Additionally, we provide specialized brake pad tool support to assist in proper fitting and maintenance. Choose Herito for good ceramic brake pads that combine quality, reliability, and advanced technology tailored to your specific needs.
