

**Slotted good ceramic brake pads offering operating temperature range minus 40 degrees Celsius to 630 degrees Celsius optimized for long lasting**

Our Product Introduction

for more products please visit us on [heritobrake.com](http://heritobrake.com)

**Basic Information**

- Brand Name: Herito
- Model Number: ZK-28010

**Product Specification**

- Oe Replacement: Yes
- Wear Resistance: High Wear Resistance
- Weight: 0.5 Kg
- Noiselevel: Low Noise Operation
- Numberofpads: 4
- Size: Standard
- Frictioncoefficient: 0.35
- Position: Front And Rear

### Product Description:

The Disc Brake Pad Set is an essential component for ensuring optimal braking performance and safety for your vehicle. Designed to be used on both the front and rear wheels, this versatile set offers a comprehensive solution for those seeking reliable and efficient braking power. One of the standout features of this brake pad set is its slotted design, which enhances heat dissipation and reduces brake fade, providing consistent performance under various driving conditions.

Constructed to operate efficiently within a wide temperature range of -40°C to 630°C, these disc brake pads can handle extreme conditions without compromising their performance. This impressive operating temperature range ensures that the brake pads maintain their structural integrity and braking efficiency even during aggressive driving or heavy braking situations. Additionally, the brake pads boast exceptional heat resistance of up to 600°C, which helps prevent overheating and extends the lifespan of both the pads and the brake rotors.

With a friction coefficient of 0.35, these disc brake pads deliver a balanced combination of stopping power and smooth braking feel. This friction level is carefully engineered to provide reliable control and responsiveness, allowing drivers to confidently manage their vehicle's speed and stopping distance. Whether you are navigating city traffic or tackling mountain roads, these brake pads offer dependable performance that enhances overall driving safety.

These disc brake pads are crafted from high-quality materials, making them an excellent choice for anyone looking for good ceramic brake pads. Ceramic brake pads are well-known for their quiet operation, minimal dust production, and long-lasting durability, all of which are characteristics embodied by this brake pad set. Their advanced ceramic formulation ensures reduced wear on brake rotors, helping to save on maintenance costs over time. Moreover, the ceramic material contributes to a cleaner wheel appearance, as it produces less brake dust compared to traditional organic or semi-metallic pads.

The slotted design of these disc brake pads not only aids in heat management but also enhances the removal of gas and debris from the braking surface. This feature improves pad-to-rotor contact, resulting in more consistent braking performance and reduced risk of brake fade during prolonged use. The slots also help to prevent glazing of the pad surface, maintaining optimal friction levels and ensuring that your brakes remain effective in all driving conditions.

Installation of this brake pad set is straightforward, as the pads are designed to fit seamlessly on both the front and rear wheels of your vehicle. This compatibility makes it a convenient and cost-effective option for those who want to upgrade or replace their brake pads with a single purchase. Whether you are performing routine maintenance or upgrading your braking system, this disc brake pad set delivers excellent value and performance.

In summary, the Disc Brake Pad Set is a high-performance, durable, and reliable choice for vehicle owners seeking good ceramic brake pads that can withstand demanding conditions. Its slotted design, wide operating temperature range, strong friction coefficient, and superior heat resistance make it an outstanding product that enhances vehicle safety and driving confidence. By choosing this set, you ensure that your vehicle is equipped with disc brake pads that provide consistent stopping power, reduced noise, and extended service life, making it an excellent investment for any driver.

### Features:

- Product Name: Disc Brake Pad Set
- Placement on Vehicle: Front and Rear
- Size: Standard
- Durability: High Wear Resistance for long-lasting performance
- Position: Front and Rear
- Number of Pads: 4
- Made from premium materials ensuring OEM brake pads quality
- Recognized as the best brake pad brand in the market
- Features the best ceramic brake pads for superior braking efficiency

### Technical Parameters:

Operating Temperature Range	-40°C To 630°C
Position	Front And Rear
Noise Level	Low Noise Operation
Durability	High Wear Resistance
Size	Standard
Factory No	ZK-14006
Placement On Vehicle	Front And Rear
Heat Resistance	Up To 600°C
OE Replacement	Yes
Friction Coefficient	0.35

### Applications:

The Herito Disc Brake Pad Set, model number ZK-28010, is an essential component designed to enhance the braking performance of . . .

your vehicle. Originating from China, this set is manufactured to meet high-quality standards, ensuring durability and reliability in various driving conditions. With a standard size and compatibility for both front and rear placements on the vehicle, these brake pads provide a versatile solution for comprehensive brake maintenance.

These OEM brake pads are engineered to fit perfectly into the braking system, offering optimal friction with a coefficient of 0.35. This friction level ensures efficient stopping power while maintaining smooth and quiet operation. The inclusion of slotted design in the Herito brake pads helps in dissipating heat more effectively, reducing brake fade during intense or prolonged braking sessions. This feature is particularly beneficial for drivers who require consistent braking performance in both city and highway driving scenarios.

The Herito ceramic brake pads within this set are ideal for everyday use as well as more demanding applications. Whether you are commuting in urban traffic, driving on winding mountain roads, or carrying heavy loads, these brake pads deliver reliable stopping power and enhanced safety. The ceramic material composition also contributes to lower dust generation, keeping your wheels cleaner and reducing maintenance efforts.

Application occasions for the Herito Disc Brake Pad Set include routine vehicle servicing, brake system upgrades, and replacements after wear. They are well-suited for passenger cars, light trucks, and SUVs that require OEM brake pads to maintain original equipment performance. The ability to install these pads on both the front and rear positions of the vehicle makes them a practical choice for comprehensive brake system overhauls.

In scenarios where safety and performance are paramount, such as long-distance travel, mountainous terrain, or stop-and-go traffic conditions, the Herito ZK-28010 brake pads provide dependable braking efficiency. Their design ensures rapid heat dissipation and reduced noise, enhancing the overall driving experience. For drivers seeking high-quality, OEM-standard ceramic brake pads that combine durability, performance, and ease of installation, the Herito Disc Brake Pad Set is an excellent choice.

### Customization:

Herito offers product customization services for the Disc Brake Pad Set, model number ZK-28010, designed to fit both front and rear positions. Manufactured in China, these disc brake pads are known for their low noise operation and reliable performance. Weighing 0.5 Kg and consisting of 4 standard-sized pads, this set represents the best brake pad brand in the market. Our customization options ensure you receive the best ceramic brake pads tailored to your specific vehicle requirements, providing optimal safety and durability.
