

Standard Disc Brake Pad Set Frictioncoefficient 0.35 0.5 Kg Durable Replacement Parts for Industrial Vehicles and Machinery

Our Product Introduction

Basic Information

- Brand Name: Herito
- Model Number: ZK-28010

Product Specification

- Oe Replacement: Yes
- Placement On Vehicle: Front And Rear
- Durability: High Wear Resistance
- Noiselevel: Low Noise Operation
- Frictioncoefficient: 0.35
- Factory No: ZK-14006
- Numberofpads: 4
- Shims Included: Yes

Product Description:

The Disc Brake Pad Set, factory number ZK-14006, is engineered to deliver exceptional performance and reliability for a wide range of vehicles. Designed to be installed on both the front and rear wheels, this set provides comprehensive stopping power, ensuring safety and control in various driving conditions. With a standard size that fits most compatible vehicles, the installation process is straightforward, making it an excellent choice for both professional mechanics and DIY enthusiasts.

One of the standout features of this Disc Brake Pad Set is its impressive heat resistance, withstanding temperatures of up to 600°C. This high thermal tolerance ensures that the brake pads maintain their integrity and performance even during intense braking situations, such as downhill driving or emergency stops. Heat resistance is a critical factor in brake pad quality because excessive heat can cause brake fade, reducing braking efficiency. With this product, drivers can have confidence in consistent braking power, no matter how demanding the driving conditions become.

Durability is another key attribute of this brake pad set. Manufactured with high wear resistance materials, these pads are built to last, providing extended service life compared to conventional brake pads. High wear resistance means that the pads resist abrasion and degradation over time, minimizing the need for frequent replacements and lowering overall maintenance costs. This durability also contributes to better value for money, as drivers benefit from long-lasting, reliable braking performance.

When it comes to safety and performance, choosing the best ceramic brake pads is essential. Ceramic brake pads are renowned for their superior braking ability, low dust production, and quiet operation. This Disc Brake Pad Set aligns perfectly with these characteristics, making it one of the best ceramic brake pads available on the market. The ceramic composition ensures smooth and efficient braking, reducing noise and vibration, which enhances the overall driving experience.

In addition to excellent braking performance, these pads produce less brake dust compared to traditional semi-metallic pads. Less dust means cleaner wheels and reduced wear on the braking system components, contributing to the longevity of the entire braking assembly. This product is an ideal choice for drivers who prioritize both performance and maintenance convenience.

The versatility of this Disc Brake Pad Set is further demonstrated by its suitability for use on both front and rear wheels. Many brake pad sets are designed for only one axle, but having a set that covers both front and rear placements ensures balanced braking performance across the vehicle. Balanced braking is crucial for vehicle stability and control, particularly during sudden stops or on slippery surfaces.

In summary, the Disc Brake Pad Set with factory number ZK-14006 offers a perfect blend of heat resistance, durability, and ceramic brake pad benefits. Its ability to withstand temperatures up to 600°C, combined with high wear resistance materials, ensures long-lasting and reliable braking performance. The standard size and compatibility with both front and rear placements make it a versatile and practical choice for a wide range of vehicles.

For those seeking the best ceramic brake pads to enhance their vehicle's braking system, this Disc Brake Pad Set stands out as a top contender. Its superior heat tolerance, durability, and clean, quiet operation make it an excellent investment in both safety and performance. Whether you're upgrading your current brake pads or replacing worn components, this set delivers the quality and reliability that discerning drivers expect from the best ceramic brake pads on the market.

Features:

Product Name: Disc Brake Pad Set

Heat Resistance: Up To 600°C for optimal performance under extreme conditions

Shims Included: Yes, to reduce noise and vibration

Position: Suitable for both Front and Rear installation

Wear Resistance: High Wear Resistance ensures long-lasting durability

Size: Standard size for easy fitment

Made from premium materials to provide the best ceramic brake pads experience

Compatible with OEM brake pads for seamless replacement

Engineered as one of the best ceramic brake pads on the market for reliable stopping power

Technical Parameters:

Shims Included	Yes
Size	Standard
Operating Temperature Range	-40°C To 630°C
OE Replacement	Yes
Number of Pads	4
Slotted	Yes
Friction Coefficient	0.35
Durability	High Wear Resistance
Weight	0.5 Kg
Wear Resistance	High Wear Resistance

Applications:

The Herito Disc Brake Pad Set, model number ZK-28010, is designed to deliver exceptional performance in a wide range of automotive applications.

applications. Originating from China, these high-quality brake pads are engineered for both front and rear positions, making them a versatile choice for various vehicle types. Featuring a standard size and slotted design, they ensure optimal heat dissipation and consistent braking performance, which is essential for safe driving under diverse conditions.

One of the standout features of the Herito brake pads is their high wear resistance, which guarantees longevity and reliability even under rigorous use. Their operating temperature range of -40°C to 630°C allows them to perform effectively in extreme weather conditions, from freezing winters to hot summer days, making them suitable for year-round driving. This durability and temperature resilience make them ideal for both everyday commuting and more demanding driving scenarios such as mountainous terrains or heavy traffic situations.

The Herito Disc Brake Pad Set is part of the best ceramic brake pads category, combining the benefits of ceramic material with advanced engineering. Ceramic brake pads are known for their quiet operation, low dust generation, and superior stopping power, which enhances the overall driving experience. These pads are an excellent upgrade from traditional OEM brake pads, offering improved braking efficiency without compromising the vehicle's original specifications.

These brake pads are perfect for drivers who prioritize safety and performance in their vehicles. Whether used in urban environments with frequent stop-and-go traffic or on highways requiring reliable high-speed braking, the Herito ZK-28010 pads excel in providing smooth and responsive braking. Additionally, their slotted design helps to minimize brake fade and maintain consistent friction, which is crucial during extended braking periods, such as downhill driving or towing.

In summary, the Herito Disc Brake Pad Set is well-suited for a variety of occasions and scenarios, including daily commuting, long-distance travel, and challenging driving conditions. As one of the best ceramic brake pads available, these OEM brake pads from Herito ensure safety, durability, and superior braking performance, making them a dependable choice for any vehicle owner seeking high-quality front and rear brake pads.

Customization:

Herito offers product customization services for the Disc Brake Pad Set model ZK-28010, designed and manufactured in China. These ceramic brake pads are engineered with high wear resistance, ensuring durability and long-lasting performance. Featuring a slotted design, the pads provide efficient heat dissipation and reduced brake fade, making them suitable for both front and rear positions. Weighing 0.5 Kg, this set operates effectively within a temperature range of -40°C to 630°C. Choose Herito for the best ceramic brake pads that combine reliability, safety, and superior braking performance tailored to your specific needs.
