

Front And Rear Disc Brake Pad Set Semi-metallic BNX Braking System Engineered for Long Lasting Performance in Commercial

Our Product Introduction

for more products please visit us on heritobrake.com

Basic Information

- Brand Name: Herito
- Model Number: ZK-38001

Product Specification

- Braking System: BNX
- Brake Type: Disc Brakes
- Material: Semi-metallic
- Product Code: DBPS
- Heatresistance: Up To 650°F (343°C)
- Brakeperformance: Excellent Stopping Power
- Package Contents: 4 Brake Pads
- Accessories: Yes

Product Description:

The Disc Brake Pad Set is an essential component designed for both the front and rear placement on your vehicle, ensuring comprehensive braking performance and safety. Engineered to meet the demands of modern driving, these brake pads provide reliable stopping power and durability, making them an excellent choice for vehicle owners who prioritize safety and efficiency on the road. Whether you are navigating city streets or tackling challenging terrains, this brake pad set ensures consistent and smooth braking response.

Constructed from high-quality semi-metallic material, the Disc Brake Pad Set offers a perfect balance between performance and longevity. Semi-metallic brake pads are widely regarded as one of the best brake pad materials available in the market today. They combine metal fibers with organic compounds to deliver superior heat dissipation, enhanced friction, and excellent wear resistance. This makes the Disc Brake Pad Set not only a cost-effective solution but also a reliable one that can withstand the rigors of daily driving and demanding conditions.

One of the standout features of this Disc Brake Pad Set is its high wear resistance. Thanks to the semi-metallic composition, these brake pads resist degradation and maintain their structural integrity over time. This durability translates into longer intervals between replacements, reducing maintenance costs and ensuring your vehicle remains safe and roadworthy for extended periods. High wear resistance is a critical attribute for brake pads, especially for drivers who cover significant mileage or frequently engage in stop-and-go traffic situations.

With a friction coefficient of 0.35, these brake pads deliver optimal braking power, allowing for secure and responsive stops. The friction coefficient is a key performance metric that defines how effectively a brake pad can convert kinetic energy into heat, slowing down the vehicle efficiently. A friction coefficient of 0.35 ensures that the Disc Brake Pad Set provides the necessary grip on the brake rotors without compromising on smoothness or causing excessive rotor wear. This makes them suitable for a wide range of driving environments and conditions.

The Disc Brake Pad Set is specifically designed for disc brakes, which are known for their superior braking performance compared to drum brakes. Disc brakes offer better heat dissipation, reduced fade during heavy braking, and more consistent stopping power. By choosing brake pads optimized for disc brakes, you are investing in enhanced vehicle control and safety. This brake pad set complements the disc brake system perfectly, ensuring that your vehicle's braking components work harmoniously for maximum efficiency.

For those seeking the best ceramic brake pads, it is important to understand the differences between ceramic and semi-metallic options. While ceramic brake pads are praised for their quiet operation and low dust production, the semi-metallic material used in this Disc Brake Pad Set delivers higher wear resistance and better heat management, making it an excellent alternative for drivers who value durability and performance. In fact, many drivers find that semi-metallic pads offer a combination of benefits that rivals and sometimes surpasses even the best ceramic brake pads.

Additionally, good ceramic brake pads often come with certain trade-offs, such as higher cost or lower wear resistance, which this semi-metallic Disc Brake Pad Set effectively addresses. By selecting this product, you gain access to a brake pad set that provides strong braking force, high durability, and reliable performance under diverse driving conditions. This ensures that you do not have to compromise between performance and longevity.

In summary, the Disc Brake Pad Set is a top-tier choice for vehicle owners looking for a high-quality, semi-metallic brake pad solution suitable for both front and rear applications. With its friction coefficient of 0.35, high wear resistance, and compatibility with disc brake systems, it stands out as a durable and efficient brake pad set. Whether you are comparing to the best ceramic brake pads or evaluating the best brake pad material for your vehicle, this semi-metallic Disc Brake Pad Set offers a compelling balance of performance, safety, and value. Choose this brake pad set to enhance your vehicle's braking system and enjoy peace of mind on every drive.

Features:

- Product Name: Disc Brake Pad Set
- Installation: Easy To Install with Bolt-on Design
- Friction Coefficient: 0.35 for reliable braking performance
- Heat Resistance: Up To 650°F (343°C) ensuring durability under high temperatures
- Placement On Vehicle: Suitable for both Front And Rear use
- Includes Accessories: Yes, comes with necessary brake pad tools for installation
- Material: High-quality ceramic brake pads for enhanced braking efficiency
- Compatible with ceramic brake pad systems for quiet and smooth operation

Applications:

The Herito Disc Brake Pad Set, model number ZK-38001, is designed to deliver exceptional performance and reliability in a variety of application occasions and scenarios. Manufactured in China with the highest standards, this set is compatible with BNX braking systems and is specifically engineered for disc brakes, making it an ideal choice for those seeking the best brake pad material available on the market.

One of the most common application occasions for the Herito ZK-38001 brake pads is daily urban commuting. Whether you are navigating busy city streets or stopping frequently in traffic, these brake pads provide consistent stopping power thanks to their high friction coefficient of 0.35. This ensures that you have responsive braking even in stop-and-go conditions, enhancing overall safety and control.

For drivers who often embark on longer highway journeys, the Herito disc brake pads offer excellent wear resistance, maintaining their performance over extended use. The high wear resistance attribute means that the brake pads last longer, reducing the frequency of replacements and maintenance, which is particularly beneficial on long-distance trips where reliability is paramount.

Another scenario where the Herito ZK-38001 brake pads excel is in sporty or aggressive driving conditions. The robust construction and optimized friction material make these pads suitable for situations requiring sudden and powerful braking responses. Whether you are driving on winding roads or participating in track days, these are among the best ceramic brake pads that ensure consistent performance without excessive noise or dust.

Maintenance and replacement of brake pads are streamlined thanks to the compatibility with common brake pad tools. The Herito disc brake pad set is designed for ease of installation, making it convenient for professional mechanics and DIY enthusiasts alike. Using the right brake pad tool helps to ensure proper fitting and maximizes the effectiveness and lifespan of the pads.

In summary, the Herito ZK-38001 disc brake pad set is a versatile and high-quality choice suitable for everyday driving, long-distance travel, and performance scenarios. With a moderate weight of approximately 1.2 kg per set, it balances durability and efficiency. When searching for the best brake pad material or the best ceramic brake pads, this product stands out by combining superior friction, wear resistance, and ease of installation for a wide range of braking needs.

Customization:

Herito offers product customization services for the Disc Brake Pad Set, model number ZK-38001, made in China. These brake pads are designed for both front and rear placement on your vehicle, providing excellent stopping power with a friction coefficient of 0.35. Our good ceramic brake pads are crafted using the best brake pad material to ensure high wear resistance and long-lasting performance. Additionally, the set comes with all necessary accessories and a brake pad tool to facilitate easy installation and maintenance. Trust Herito for reliable and high-quality brake pad solutions tailored to your needs.

Support and Services:

Our Disc Brake Pad Set is designed to provide reliable and consistent braking performance for a variety of vehicles. To ensure optimal functionality and safety, please follow the installation instructions carefully and use compatible components as specified in the product manual.

If you encounter any issues with the brake pads, such as unusual noise, vibration, or reduced braking efficiency, inspect the pads and rotors for wear or damage. Replace the pads if the friction material is below the recommended thickness.

For maintenance, regularly check the brake system and keep it clean from dust and debris. Avoid exposure to oil or grease as it can affect the braking performance.

Our technical support team is available to assist with installation guidance, troubleshooting, and warranty claims. Please have your product details and purchase information ready when seeking assistance.

We recommend using genuine replacement parts to maintain the safety and performance standards of your braking system. Proper installation and maintenance will ensure the longevity and effectiveness of your Disc Brake Pad Set.
