

Heat Resistant Disc Brake Pad Set 4 Brake Pads Made for Disc Brakes Offering Enhanced Stopping Power and Heat Resistance

Our Product Introduction

for more products please visit us on heritobrake.com

Basic Information

- Brand Name: Herito
- Model Number: ZK-38001

Product Specification

- Product Code: DBPS
- Friction Coefficient: 0.35
- Placement On Vehicle: Front And Rear
- Package Contents: 4 Brake Pads
- Material: Semi-metallic
- Product Placement: Front And Rear
- Brakeperformance: Excellent Stopping Power
- Installation: Easy To Install, Bolt-on Design

Product Description:

The Disc Brake Pad Set is engineered to deliver superior braking performance, making it an essential upgrade for any vehicle equipped with disc brakes. Renowned as one of the best brake pad brands in the market, this set combines advanced materials and innovative design to provide excellent stopping power, ensuring safety and reliability in all driving conditions. Whether you are navigating city streets or tackling challenging terrains, these brake pads offer consistent performance that drivers can depend on.

Designed for both front and rear placement on the vehicle, this comprehensive set includes four brake pads, providing a complete solution for your braking needs. The versatility of the set means that it can be used to replace worn-out pads on either axle, ensuring balanced and effective braking across all wheels. This is particularly important for maintaining vehicle stability and control during sudden stops or emergency braking situations.

The brake pads are specifically crafted for disc brakes, which are widely recognized for their superior heat dissipation and stopping efficiency compared to drum brakes. Disc brake pads are crucial components that press against the brake rotor to create the friction necessary to slow down or stop the vehicle. The Disc Brake Pad Set utilizes the BNX braking system technology, which enhances the overall braking response and reduces brake fade, a common issue during prolonged or intense braking.

One of the standout features of this brake pad set is its composition as ceramic brake pads, which are known for their durability, low dust generation, and quiet operation. These best ceramic brake pads not only provide excellent stopping power but also contribute to a cleaner wheel environment, reducing the amount of brake dust that accumulates on rims. This helps maintain the aesthetic appeal of your vehicle while ensuring optimal brake function.

When it comes to choosing the best brake pad brand, this Disc Brake Pad Set exemplifies quality and performance. Each pad is manufactured to meet stringent industry standards, guaranteeing long-lasting wear and consistent braking efficiency. The ceramic material used in these pads also offers resistance to high temperatures, preventing warping and extending the lifespan of both the pads and the brake rotors.

The package contents include four brake pads, which is sufficient to replace the entire set on either the front or rear axle. This all-inclusive package simplifies the maintenance process, allowing vehicle owners or mechanics to perform a complete brake pad replacement without needing to purchase additional components. The ease of installation combined with the high-quality materials makes this set a top choice for those seeking reliable and effective disc brake pads.

In summary, the Disc Brake Pad Set is an outstanding product that delivers excellent stopping power through its advanced BNX braking system and ceramic pad composition. Suitable for both front and rear placement on vehicles with disc brakes, this set ensures balanced and effective braking performance. As one of the best brake pad brands offering the best ceramic brake pads, it provides a perfect blend of safety, durability, and low maintenance. Whether upgrading your current brake pads or performing routine maintenance, this set is a smart investment in your vehicle's braking system and overall safety.

Features:

- Product Name: Disc Brake Pad Set
- Material: Semi-metallic for durability and performance
- Brake Performance: Excellent stopping power for safe driving
- Installation: Easy to install with a bolt-on design
- Includes Accessories: Yes, complete set for convenience
- Weight: Approximately 1.2 Kg per set
- Comparable to the best ceramic brake pads in terms of performance
- Offers the reliability and efficiency of good ceramic brake pads

Applications:

The Herito Disc Brake Pad Set, model number ZK-38001, is designed to provide reliable and efficient braking performance for both front and rear disc brakes. Manufactured in China with high-quality materials, these ceramic brake pads are an excellent choice for a wide range of driving occasions and scenarios. Their bolt-on design ensures easy installation, making them a convenient upgrade or replacement for your vehicle's braking system.

One of the primary application occasions for the Herito Disc Brake Pad Set is everyday urban driving. Whether you are commuting through busy city streets or running errands, the ceramic brake pads offer smooth and consistent braking performance. Thanks to their superior friction coefficient of 0.35, these pads deliver excellent stopping power without compromising on comfort or noise levels. The ceramic composition is widely regarded as the best brake pad material for minimizing brake dust and reducing wear on brake rotors.

Additionally, these brake pads are well-suited for highway driving and long-distance travel. Their heat-resistant properties allow them to maintain optimal performance even during extended periods of braking, such as on downhill slopes or in heavy traffic. This heat resistance ensures the pads do not fade or lose effectiveness, providing drivers with confidence and safety on the road.

For more demanding scenarios such as spirited driving or light off-road use, the Herito ZK-38001 ceramic brake pads continue to perform admirably. The combination of their sturdy construction and ceramic material helps absorb and dissipate heat efficiently, reducing the risk of brake fade under stress. This makes them a versatile choice for drivers who require dependable braking in a variety of conditions.

Whether you are replacing worn-out pads or upgrading your braking system, the Herito Disc Brake Pad Set offers a balanced blend of durability, performance, and ease of installation. Their compatibility with both front and rear disc brakes makes them an all-in-one solution for vehicle maintenance. In summary, these ceramic brake pads provide the best brake pad material advantages, including quiet operation, low dust production, and excellent heat resistance, making them ideal for multiple driving occasions and scenarios.

Customization:

Herito offers product customization services for the Disc Brake Pad Set, model number ZK-38001, made in China. This semi-metallic brake pad set features a friction coefficient of 0.35, ensuring excellent stopping power and high wear resistance, ideal for the BNX braking system. Although designed with semi-metallic material, our customization options can help you achieve performance comparable to the best ceramic brake pads. Choose Herito for tailored solutions that meet your specific braking requirements and experience the quality and

reliability associated with the best ceramic brake pads in the market. Trust Herito's expertise to deliver the best ceramic brake pads performance customized to your needs.

Support and Services:

Our Disc Brake Pad Set is designed to provide reliable and consistent braking performance for a wide range of vehicles. To ensure optimal operation, it is important to properly install and maintain the brake pads according to the manufacturer's guidelines. Before installation, inspect the brake rotor for any signs of wear or damage, and replace if necessary. Clean the rotor surface to remove any contaminants that could affect braking efficiency. When installing the brake pads, ensure they are correctly aligned and securely fitted within the caliper. Avoid touching the friction surface of the pads to prevent contamination. After installation, it is recommended to perform a bedding-in process to allow the brake pads to properly mate with the rotor surface. This typically involves a series of controlled stops from moderate speeds. Regular inspection of the brake pads for wear is essential. Replace the pads when the thickness reaches the minimum specification to maintain safe braking performance. If you experience any unusual noises, vibrations, or reduced braking effectiveness, discontinue use and have the braking system inspected by a qualified technician. For extended product life and safety, use only the recommended brake fluid and avoid aggressive driving habits. Our technical support team is available to assist with any questions regarding installation, maintenance, or performance of the Disc Brake Pad Set.
